WEBSITE SPECIFICATIONS

Objective

GET FLY is a website created for affordable purchase of authentic and original clothing pieces, it is a verified reselling clothing store. The store is situated in Botswana Gaborone. GET FLY main objective is to provide the youth quality original clothing at an affordable price right here in Botswana without need to go out and use complex websites from far away. This is a e commerce website with an easy shopping system. GET FLY was founded by a young man of the name of Dante, he manages the clothing store along side his team right here in Gaborone.

The store was brought about due to the demand of quality clothing brands in Botswana. There already are stores that provide similar services but the difference is this store is a verified brand which sells real quality brands from the actual stores at an affordable price. Products are readily available in the store and do not require complex shipping from far places.

Website Goals

To raise awareness about GET FLY brand.

To attract youth interested in streetwear fashion.

To provide a responsive and mobile-friendly website.

To showcase products in a clean and organized layout.

To improve user experience through easy navigation.

To ensure all pages are interconnected without broken links.

Target Audience

People of the ages : 13-25, fashion lovers , social media active and customers that can afford and willing to pay.

Technical Aptitude

The target users are familiar with:

Smartphones.

Social media platforms.

Online shopping websites.

Browsing products online.

The website was therefore designed with responsive features and simple navigation.

INFORMATION DESIGN & TAXONOMY

Website is structured into the following pages :

Home page

Shop page

Products

About

Contact

These pages are all interlinked and accessible from each other, and allow easy access in the website.

SITE MAP

The site uses the 3 click rule for easy access across the website and the relationship between all the pages. Below is a simple illustration of the site map and how all pages relate.

FEEDBACK

PAGE TEMPLATE DESIGN

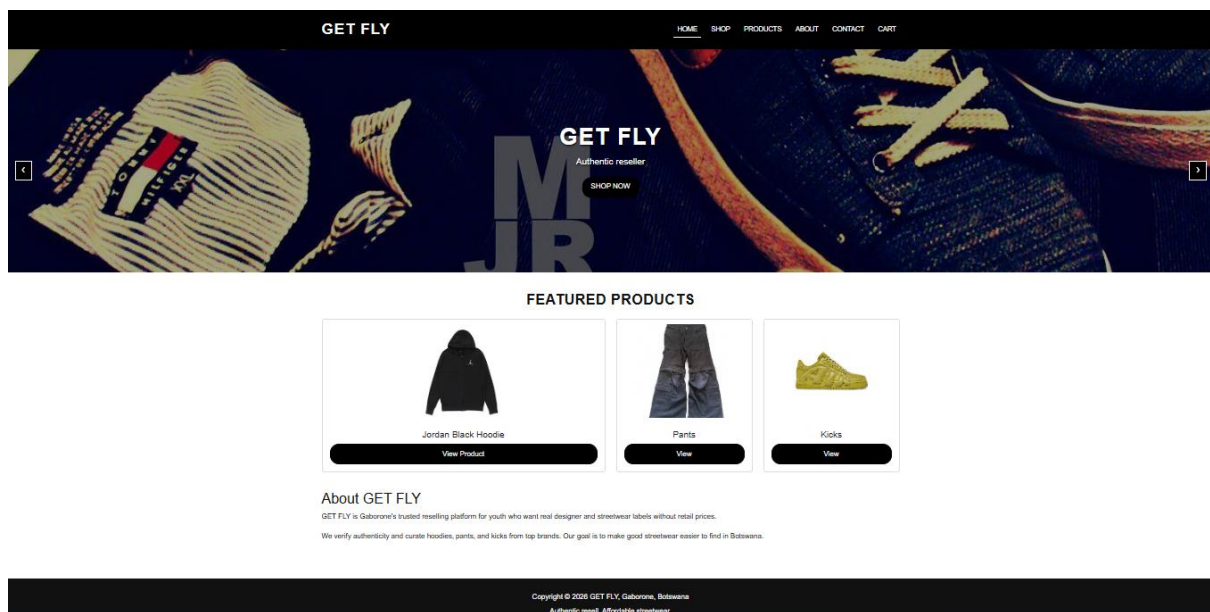

Below is a image containing 4 wireframes of home page shop page products and about

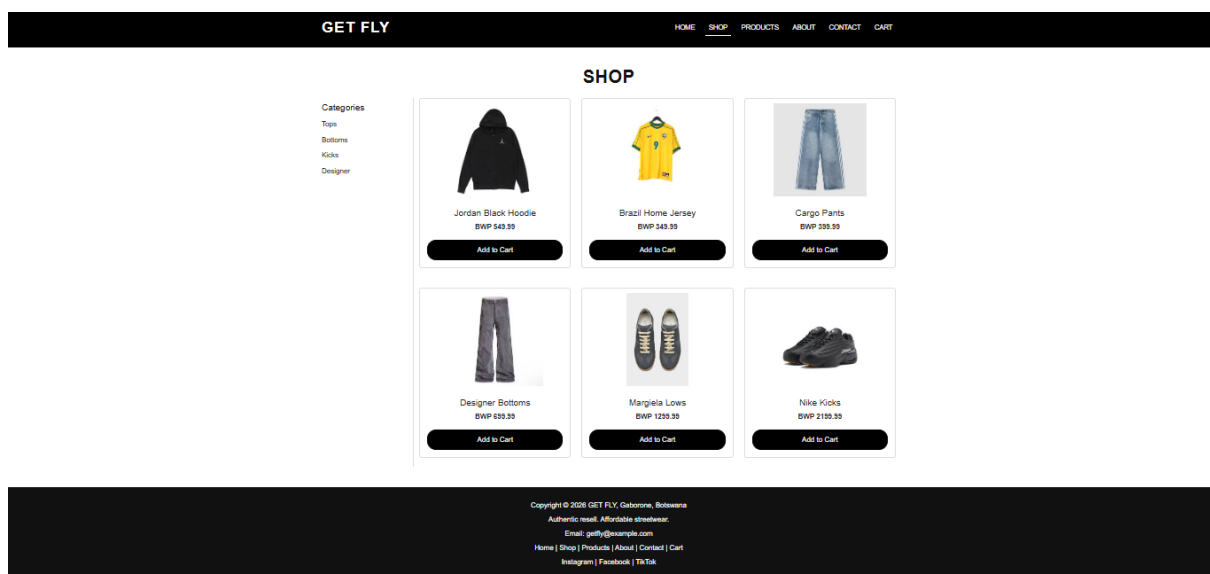

The homepage wireframe was used to plan the overall structure of the website to show how all the pages should look. Main parts of the wireframe are Navigation bar, slideshow section, featured products and About part, Footer.

WEBSITE MOCK UP

Below is a image of a mock-up of what the home page should look like in the website when it is completed. The mock up also shows the navigation bar, the pages, slide show of 3 images, bootstrap and the footer section at the bottom.

Another image below showing mock up of shop page:

This image shows sections of images of the products to be sold, the prices and a view product button.

This image below is a mock up of the contact page showing it was implemented using bootstrap and HTML 5 validation, it shows a system that will take down users name, email and a message they can send to the website.

TECHNICAL BRIEF

The following were used to bring about the website functionality:

HTML5

HTML5 was used to create the structural layer of the website. Semantic HTML elements such as:

header

- nav
- main
- section
- article
- footer

CSS3 was used to:

- Style the website.
- Improve layout appearance.
- Add spacing and typography.
- Create hover effects.

- Improve responsiveness.

Bootstrap was used to:

- Improve responsiveness.
- Create navigation bars.
- Create product cards.
- Improve layouts.
- Improve mobile compatibility.

JavaScript

JavaScript was used to create the homepage slideshow functionality.

SOFTWARE TOOLS USED

VS Studio code- was used to create edit and built the code

Wireframe cc- was used to create and sketch the wireframes for the pages

Microsoft word – used to put together the documentation.

Bootstrap CDN- used to bring about a responsive design.

GitHub- to host the website

Google Chrome – used to test and access the website.

Resources Used

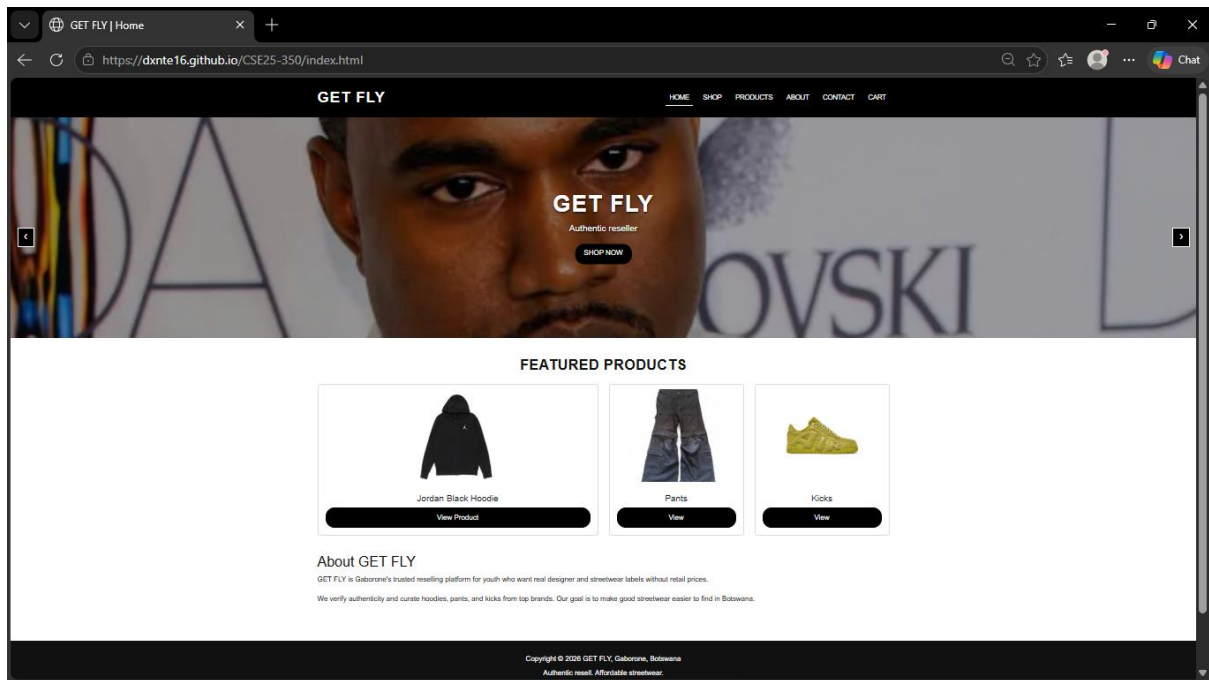

The following resources were used:

- Product images.
- Fashion banners.
- Website sketches.
- Bootstrap documentation.
- HTML5 references.

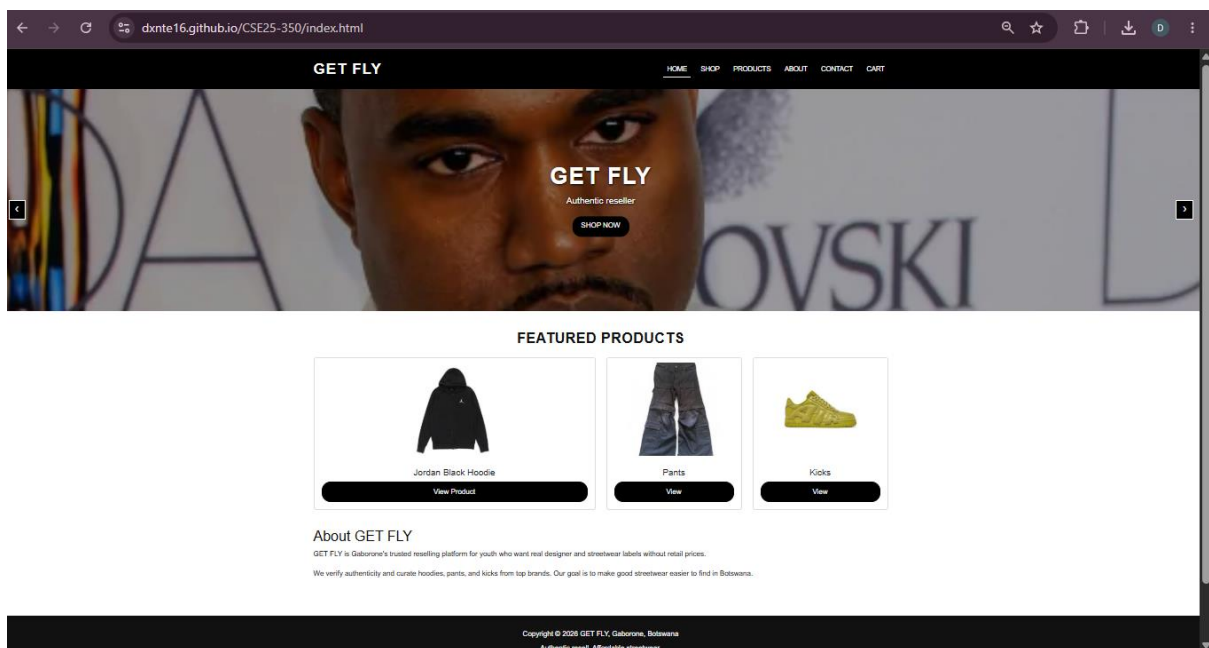

QUALITY ASSURANCE

The website was tested in different browsers to confirm broad compatibility

Images below show the evidence of the website tested in Microsoft Edge

Website tested in chrome proof below:

Website was also opened and tested in a mobile device and it functions completely, the image is below:

It was opened using a Iphone XS max.

PUBLISHING & PROMOTION

GitHub Repository

The website files were uploaded to GitHub for version control and hosting.

GitHub Repository Link

<https://github.com/dxnte16/CSE25-350>

GitHub Pages Hosting

The website was published using GitHub Pages.

Website Link

<https://dxnte16.github.io/CSE25-350/>

GitHub was used to:

- Upload website files.
- Track changes.
- Publish the website online.
- Manage website versions.

FUTURE DEVELOPMENTS

The website misses a lot of key features for full functionality the following can be done for improvement:

- Payment integration.
- User login and registration.
- Product filtering.
- Product search functionality.
- Shopping cart database integration.
- Website Personalization
- Product reviews and ratings.

WEBSITE DEVELOPMENT

Structural Layer – HTML5

HTML5 was used to structure all pages within the website.

The pages developed include:

- index.html
- shop.html
- products.html
- about.html
- gallery.html
- contact.html

- feedback.html
- cart.html

All pages are interconnected and contain no broken links.

Presentation Layer – CSS3

CSS3 was used to:

- Improve visual appearance.
- Create consistent layouts.
- Style navigation bars.
- Style product cards.
- Improve typography.
- Create hover effects.
- Improve spacing.

An external stylesheet was used throughout the website.

Bootstrap Features

Bootstrap was used to:

- Create responsive navigation bars.
- Create product cards.
- Improve mobile responsiveness.
- Create responsive grids.

8.4 JavaScript Features

JavaScript was used to:

- Create slideshow functionality.
- Improve user interaction.
- Add slideshow navigation buttons.

CONCLUSION

The GET FLY website project successfully achieved the objectives of creating a responsive and visually appealing streetwear fashion website.

The project demonstrated the practical application of:

- HTML5
- CSS3
- Bootstrap
- JavaScript
- Responsive web design
- Website planning and documentation

The website provides users with a simple and modern browsing experience while maintaining consistency and accessibility.

The project also improved skills in:

- Website planning.
- Responsive design.
- Navigation structure.
- User experience design.
- GitHub hosting.
- Documentation.
